

Q: How to know which Wi-Fi and Bluetooth card was installed inside my laptop?

A: The Bluetooth & Wi-Fi device inside MSI notebooks are in the same brand. You can confirm this by the following ways:

Method 1: In the System Information page of the BIOS, you'll see the Wi-Fi Module Information and know the brand and model name of the Wi-Fi card.

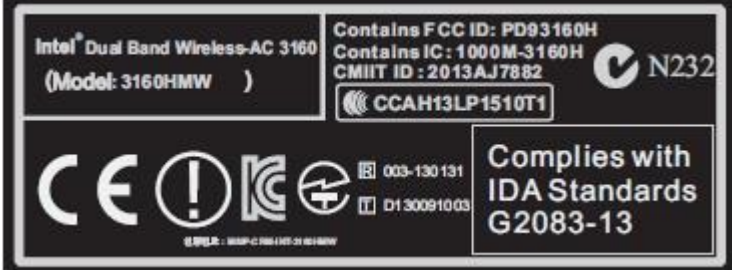

If the BIOS in your notebook doesn't show this section, please refer to the method 2.

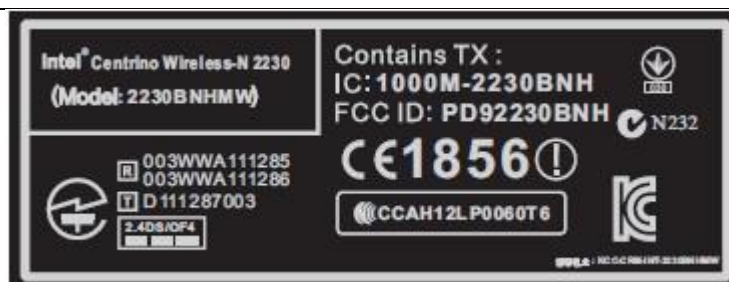

Method 2:

On the bottom cover of your laptop, there are labels showing the brand and the model of the Wi-Fi card. The brand of the Bluetooth card is the same with the one of the Wi-Fi card.

Note: For some models, you will need to remove the battery first to see the labels.
